

## Description: Plate Mounting Tape

## Product: Focus Premium Series

Focus Premium is a series of high-quality, Flexographic plate mounting tapes from Edward Graphics. Their plate mounting tapes are manufactured under strict ISO 9002 standards to meet the requirements of the demanding Flexographic press-room. Focus Premium tapes are available in three foam densities:

**Focus S (Soft)** - Focus S is the ideal choice for combination printing, when process printing, fine screens and vignettes are of the utmost importance (White foam carrier).

**Focus M (Medium)** - Focus M is preferred when process and solid/reverse printing are of equal importance (Green foam carrier).

**Focus H (Hard)** - Focus H is selected for combination printing when the quality of solids and reverses is critical (Blue foam carrier).

- Consistent thickness
- Repositionability
- Clean removal
- Conversource Custom Cut Program

**Consistent thickness** - The Focus Premium foam carriers are precisely manufactured, resulting in consistent thickness

both within a roll and from roll to roll. Consistent thickness eliminates registration issues, both plate-to-plate and plate-to-die. Focus Premium tapes are available in .015" and .020".

**Repositionability** - The plate-side adhesive is formulated to provide repositionability during plate mounting, while insuring a firm hold during the press run.

**Clean removal** - After the press run, the plate will remove cleanly from the mounting tape. In addition, the tape will remove from the plate cylinder without breaking down.

**Custom Cut Program** - Conversource stocks Focus Premium Line tapes in master rolls, and cuts to your exact requirements. You order exactly what you need and pay for exactly what you get. Odd-size offcuts are eliminated, reducing your cost.
